Power BI Assignment 2 – DAX & Data Visualization

Name: Hemavathi K

Course: Program In AI Driven Data Analytics

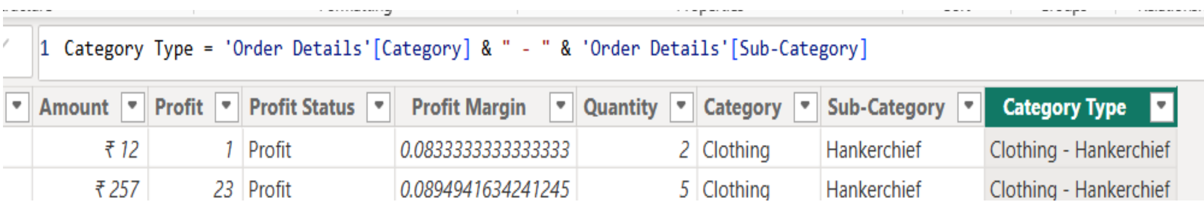
Batch: DA-FNB17

Date: 28-07-2026

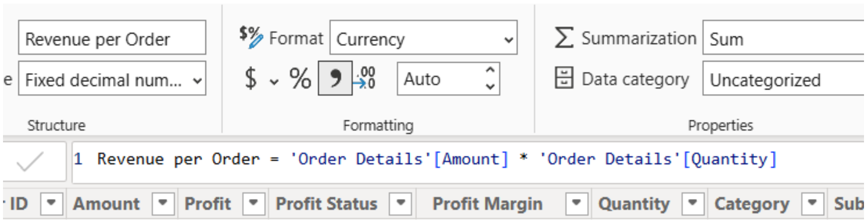
DAX Calculations

Calculated Columns

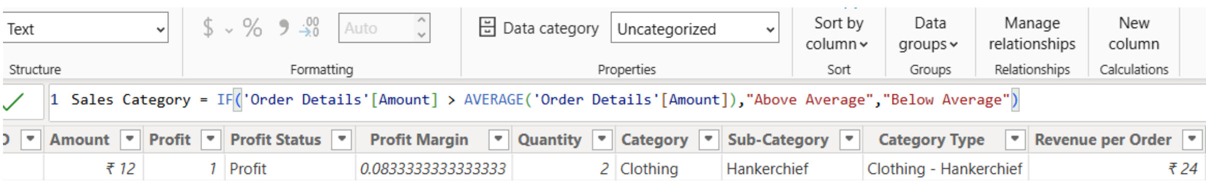
Create a Calculated Column for 'Category Type



Calculate Revenue per Order in Order Details Table:

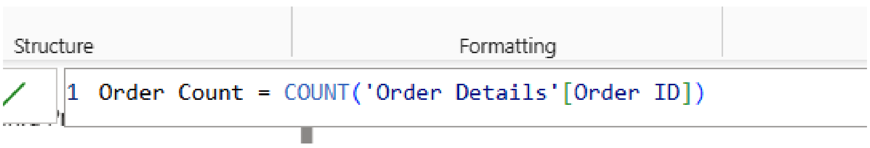


Create a Calculated Column to Categorize Sales

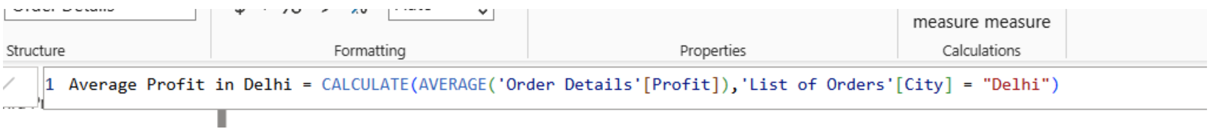


Calculated Measures

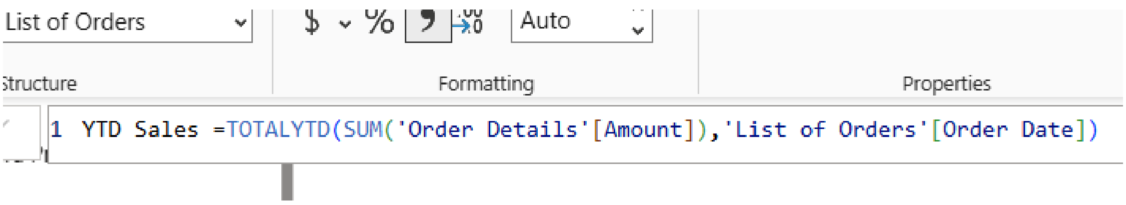
Order Count- Created the measure that calculates the total number of orders in the Order Details table.



Created the measure that calculates the average profit for orders placed in Delhi.



Created the measure that calculates total sales accumulated from the beginning of the year up to the current order date.



Data Visualization

Sales Target Achievement by Category:

1)Created the Total Sales measure and the Total Target measure

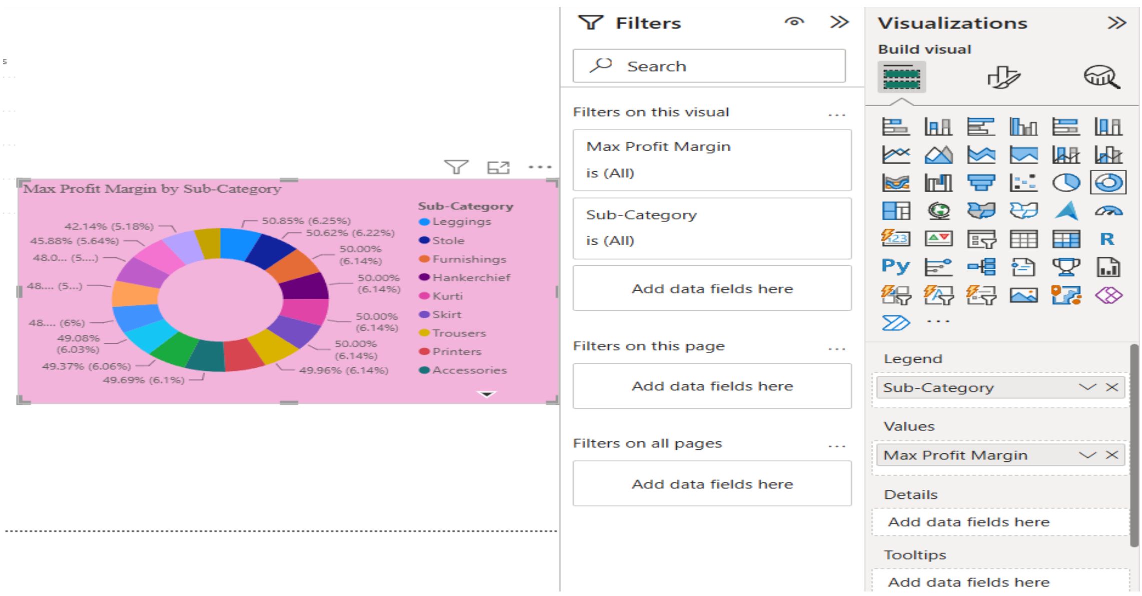
```
Total Sales = SUM('Orders Data'[Order Details.Amount])
```

```
1 Total Target = SUM('Sales Target'[Target])
```

using a clustered column chart Compared actual sales with sales targets by category

2) Max Profit Margin by Sub-Category: to Analyse the maximum profit margin 1st created the measure for max profit margin & created the Donut chart for each sub-category

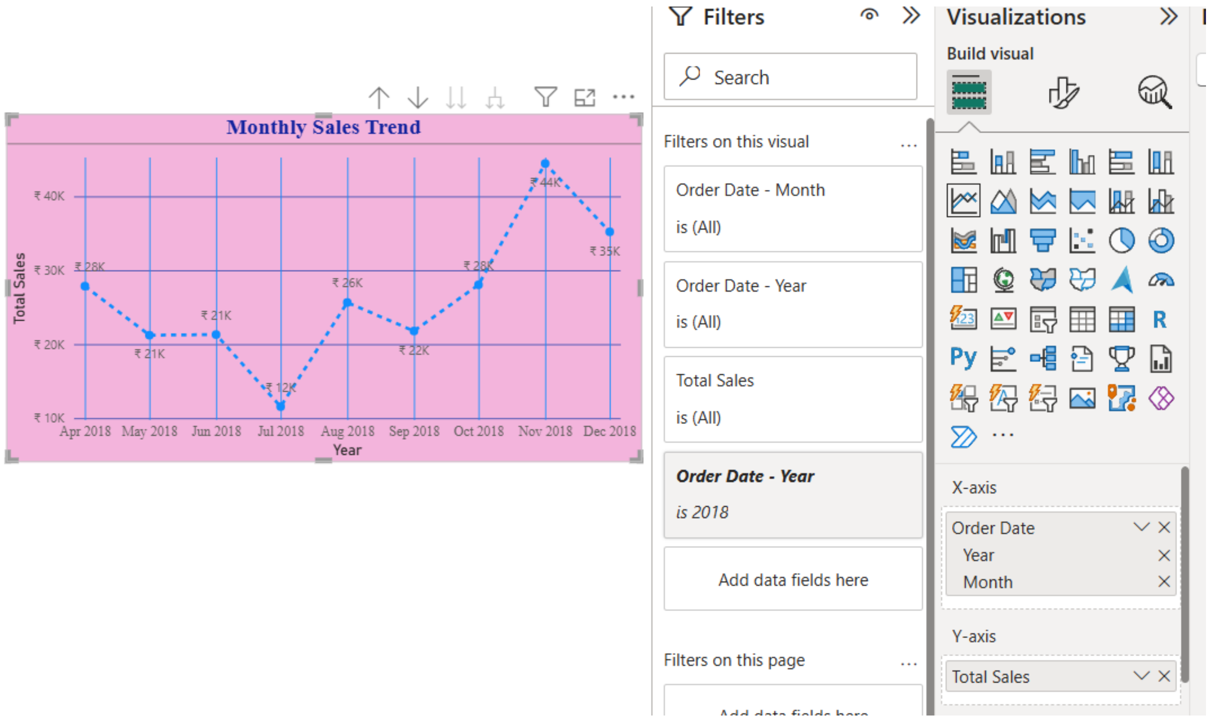
```
Max Profit Margin = MAX('Order Details'[Profit Margin])
```



3) Monthly Sales Trend: Created the Total sales in measures & Implement the line chart for the trend of monthly sales over time

```
1 Total Sales = SUM('Orders Data'[Order Details.Amount])
```

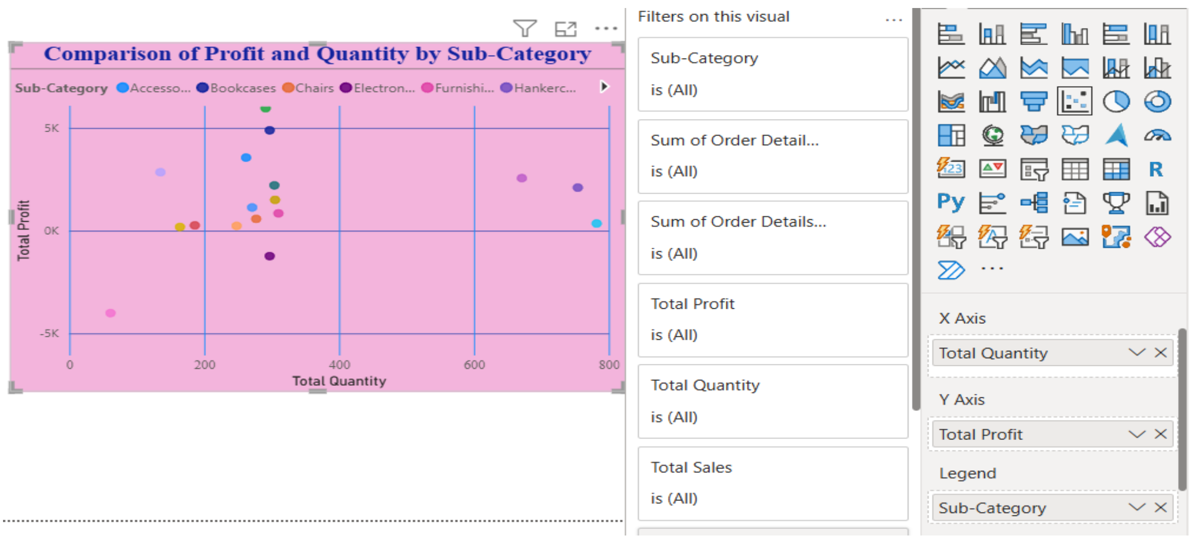
Insert the line charts



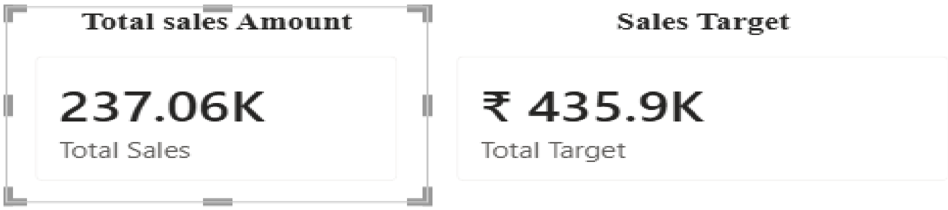
4) Comparison of Profit and Quantity by Sub-Category: created the measures for profit and Quantity & using the Scatter Chart compared different sub-categories.

```
Total Profit = sum('Order Details'[Profit])
```

```
Total Quantity = sum('Order Details'[Quantity])
```



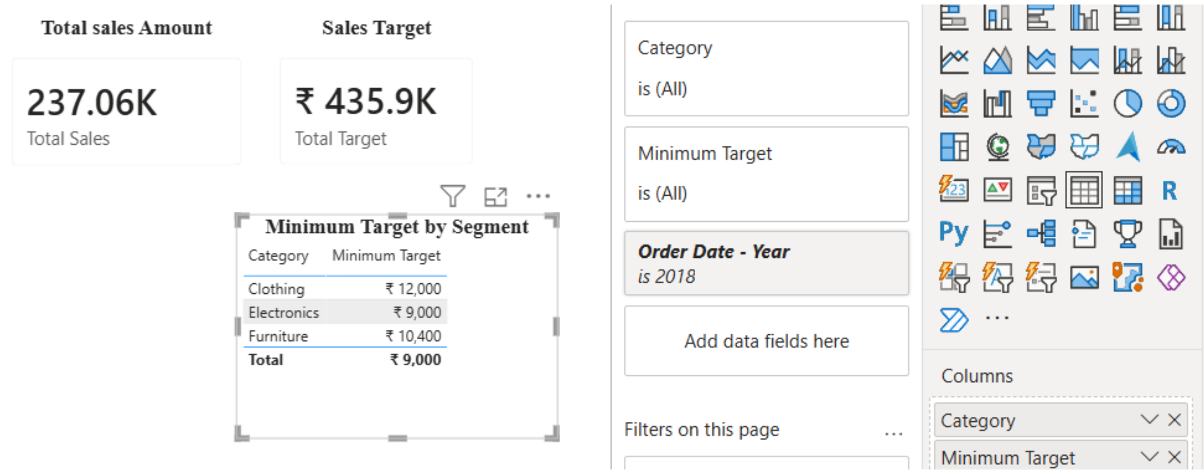
5) Comparison of Total Sales Amount and Target: Created cards to display the total sales amount alongside the sales target in Visualization.



To create a multi-row card to display the minimum target for each segment. First created the measure for Sales Target as minimum target

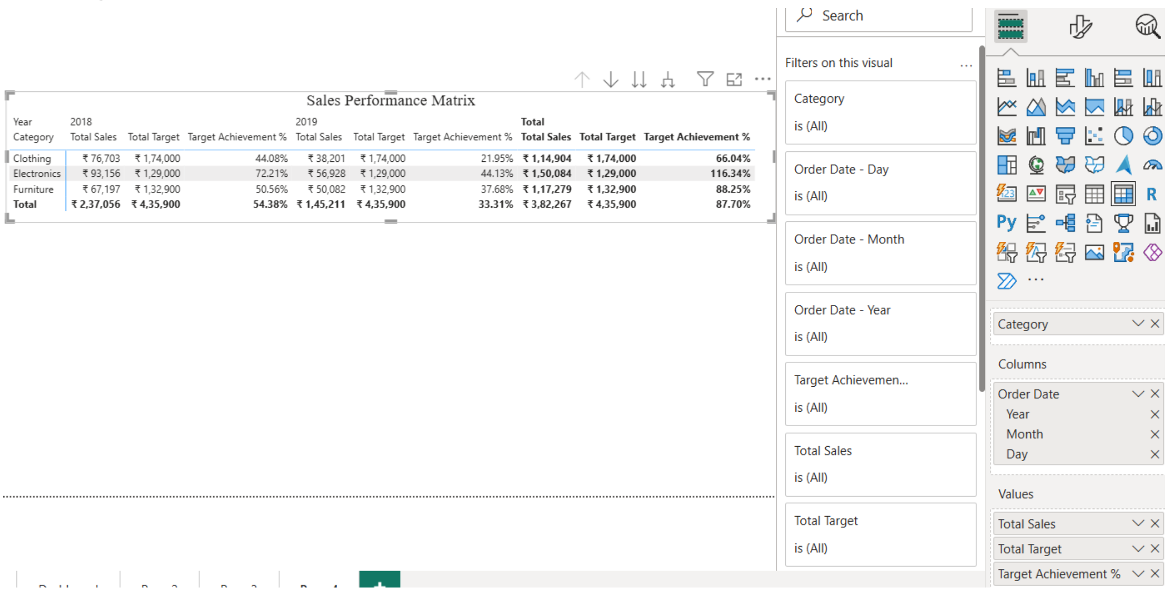
```
Minimum Target = MIN('Sales target'[Target])
```

I don't have a Multi Row card in power BI Visuals so I have used the Table Visual to display the Minimum Target for each Segment

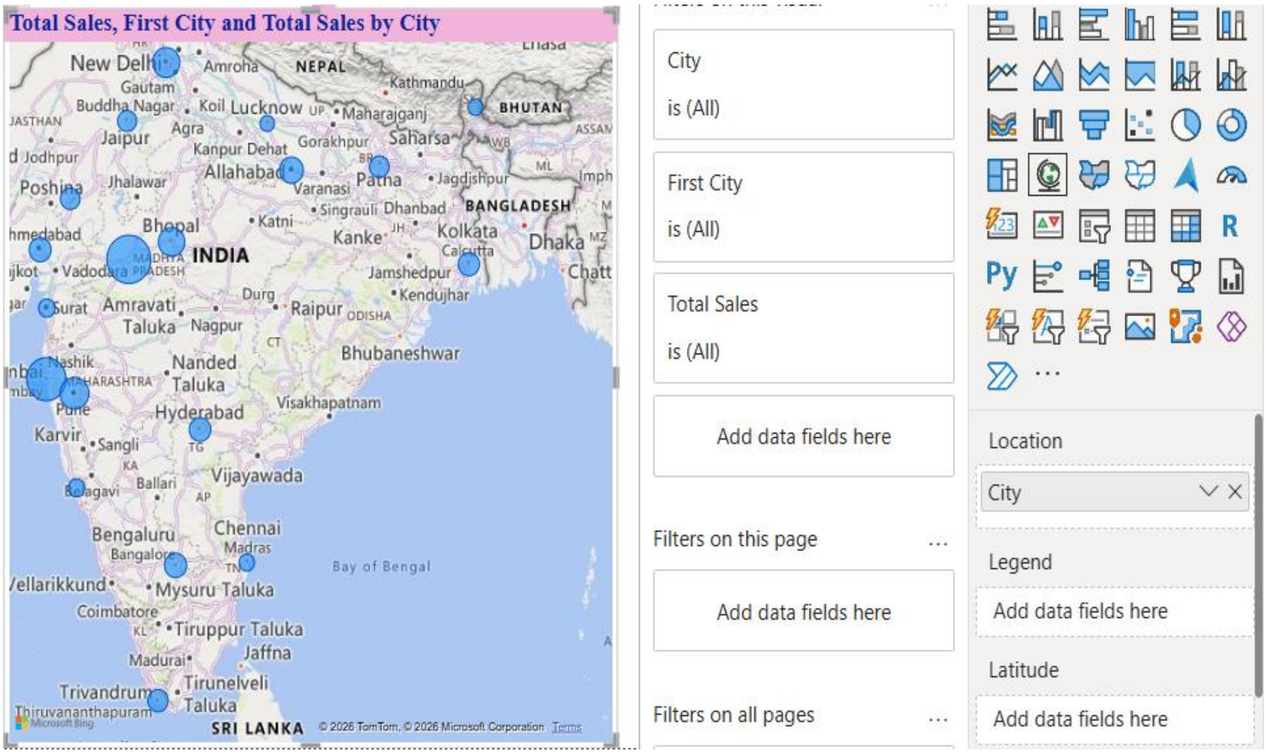


6) Sales Performance Matrix: I have created the Measure for the Target Achievement and then implement the Matrix table rows as the Category columns as Order date and values as total sales and total target & Achievement

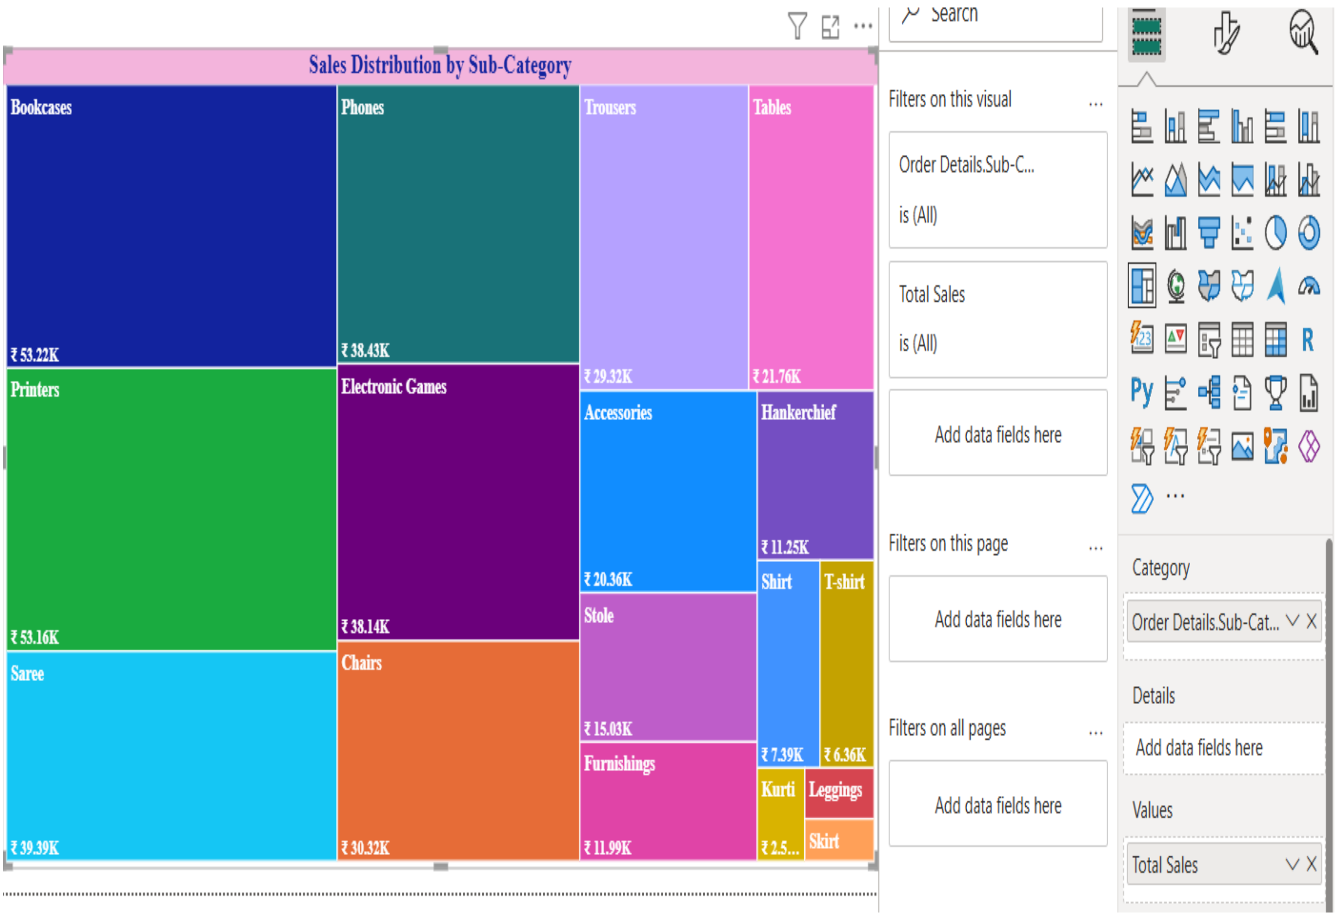
```
Target Achievement % = DIVIDE([Total Sales], [Total Target], 0)
```



7) Geographic Sales Analysis: Visualize total sales on a map by city to identify regional sales patterns.



8) Sales Distribution by Sub-Category: created the tree map visual and category as sub-category and values as total sales



9) Order Count Analysis by State: created the funnel chart to Visualize the state category by total order count.
